

ABSTRACT

2 A method and apparatus are provided for constructing a composite image
3 within an image space of a webpage. The method includes the steps of displaying
4 a plurality of source images within a content area of the webpage and dividing the
5 image space of the composite image into a plurality of subspaces. The method
6 further includes the steps of designating a subspace of the plurality of subspaces
7 for receipt of a selected image of the plurality of images and resizing the selected
8 image to fit the designated subspace of the composite image.
